

Unleash the Power of Your Data with Aparavi

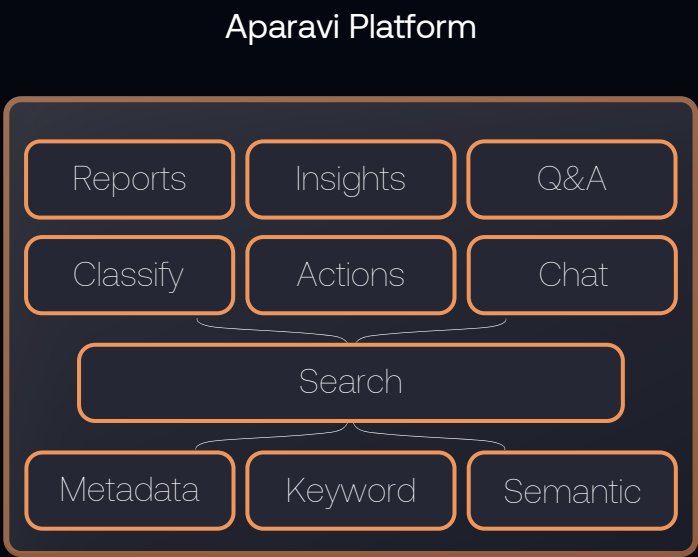

In today’s data-driven world, managing unstructured data efficiently and securely is paramount. Aparavi’s platform offers a revolutionary approach, ensuring your data stays in place while maintaining complete privacy within your environment. Our distributed architecture enables seamless data management without the need for extensive server farms. Discover how Aparavi can transform your data strategy by providing powerful insights, robust compliance, and continuous data cleanliness. Let Aparavi be your trusted partner in unlocking the full potential of your data.

1 Data In Place

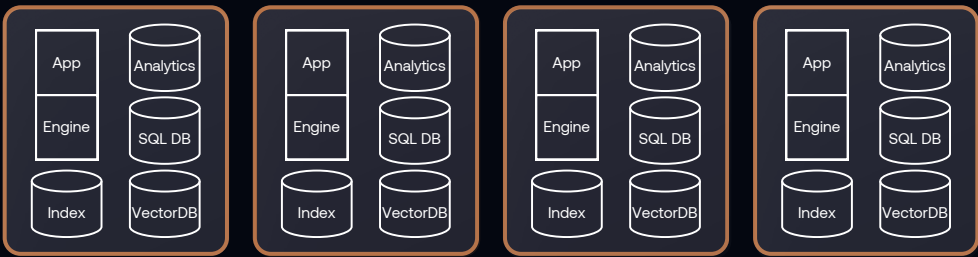

The other key aspect of Aparavi is, you deploy it within your own environment. This paradox of having to send your unknown, unstructured data to a cloud provider to then learn about whether it was ‘too’ sensitive to send to that cloud provider, is kind of ironic. Our aim is to help you avoid that by giving you the tools to attain that intelligence yourself. You don't have to send it anywhere, not even to Aparavi, it stays in your environment.

2 Data Privacy

We start with your data, that's the most important. One of the key benefits of Aparavi is your data never has to move. Forget about data lakes or data warehouses. You don't have to move your data to utilize our platform; your data stays exactly where it is.

3 Data Fabric Architecture

We have a very distributed architecture, so you don't have to manage a server farm. You deploy our application everywhere where you have unstructured data. You segment out that data space and you deploy our application. This also means distributed metadata, distributed index, distributed vector store.

4 Data Ingestion

Then you ingest that information into nodes. We support over six-thousand different file types. We have fast and accurate OCR to do image text out of images. We we're always talking about text here.

You can view this insight and utilize all the features of Aparavi at the highest level in your organization. With this level on understanding you can see trends, make big decisions on what you have, where your risks are, where you can drill all the way down to the individual node, individual file, individual embedding even. This aggregation is powerful.

Aparavi is a very robust platform with the potential for many applications. The ability to understand the ownership of data and who has access to what is going to play into in the future of unstructured data. We have policies that allow you to schedule and run continuously or on a periodic basis, so that you stay compliant, that you stay avoiding all that redundant, obsolete data so you can manage your data, so it stays clean all the time. We have limitless options to explore. Talk to one of our data experts today.

5 Data Aggregation
